TITLE	County Data Book 1997: Kentucky Kids Count.
INSTITUTION	Kentucky Kids Count Consortium.; Kentucky Youth Advocates, Inc., Louisville.
SPONS AGENCY	Annie E. Casey Foundation, Baltimore, MD.
PUB DATE	1997-12-00
NOTE	256p.; For 1995 edition see ED 403 993. For 1996 edition, see ED 408 018.
AVAILABLE FROM	Kentucky Youth Advocates, Inc., 2034 Frankfort Avenue, Louisville, KY 40206; phone: 502-895-8167; fax: 502-895-8225; e-mail: DJatKYA@aol.com ($20).
PUB TYPE	Numerical/Quantitative Data (110) -- Reports - Descriptive (141)
EDRS PRICE	EDRS Price MF01 Plus Postage. PC Not Available from EDRS.
DESCRIPTORS	Academic Achievement; *Adolescents; Birth Weight; Births to Single Women; Child Abuse; Child Neglect; *Children; *Counties; Dropout Rate; Elementary Secondary Education; Enrollment; Family Income; Family (Sociological Unit); Infants; Labor Market; Mortality Rate; Parent Background; Population Trends; Poverty; Prenatal Care; *Social Indicators; Statistical Surveys; Tables (Data); Trend Analysis; Violence; *Well Being
IDENTIFIERS	Aid to Families with Dependent Children; Food Stamp Program; *Indicators; *Kentucky; Medicaid; Supplemental Security Income Program

ABSTRACT

This Kids Count data book examines trends in the well-being of Kentucky's children on a statewide and county basis. An introduction summarizes some of the trends for Kentucky's children in the 1990s. The bulk of the report presents statewide and county data grouped into five categories: (1) poverty rates and programs (persons in poverty; median household income; total people and children receiving AFDC, Food Stamps, SSI, and Medicaid); (2) vital statistics (live births, infant deaths, birth rate, teen birth rate, early prenatal care, low birth weight, infant mortality rate, child death rate, and teen violent death rate); (3) state job market (civilian and non-civilian employment rates, total jobs in 10 broad categories such as agriculture and manufacturing, Kentucky Department of Employment Services job listings, percentage of households without phones or cars); (4) child abuse and neglect (reported and substantiated cases of physical and sexual abuse, neglect, and dependency); and (5) education (dropout rate, retention rate, transition rate, attendance rate, percentage free/reduced lunches, and expenditure per pupil). A glossary presents definitions, methodology, and data sources. (EV)

December 1997

ACKNOWLEDGMENTS

The seventh annual Kentucky KIDS COUNT Data Book is the result of the combined efforts of the Kentucky KIDS COUNT Consortium, whose members are Ronald Crouch, Dr. Lorraine Garkovich, Dr. Gary Hansen, Debra Miller, Dr. Betty Olinger, Dr. Michael Price, Valerie J. Salley, and Dr. Stephen Wilson. Each year, members of the Consortium meet to discuss the focus of the data book and to select data elements for inclusion. The Consortium members also design the media and dissemination strategies. Michael Price and Martye Scobee, from the University of Louisville's Urban Studies Institute, take the Consortium's guidance, select appropriate data elements, and design the data page layout. Lynn Humphrey, policy analyst with Kentucky Youth Advocates, collects necessary data from various national and state data sources. Debra Miller, also from Kentucky Youth Advocates, prepares the introductory material and serves as the coordinator for the KIDS COUNT Data Book.

Funding for this report and other activities of the Kentucky KIDS COUNT Consortium is provided through a grant from the Annie E. Casey Foundation in Baltimore, Maryland. The grant to the Kentucky KIDS COUNT Consortium, administered through Kentucky Youth Advocates, is part of the Casey Foundation's 50 state effort to publicize the needs of children, influence budget and program decisions at all levels of public funding, and monitor national, state, and local indicators and trends for children's health and well-being. Foundation officers Dr. William P. O'Hare and Jennifer A. Baratz play a critical role in bringing the state grantees together to learn from one another and improve our efforts at what Foundation President Douglas W. Nelson calls evidentiary advocacy.

This year's Kentucky KIDS COUNT Data Book provides county-by-county trends for the decade of the 90's and establishes baseline information for evaluation of welfare reform policies that are beginning to be implemented this year. Given the new emphasis of welfare reform on employment to build family self-sufficiency, each county's KIDS COUNT profile provides information on the local job market, including numbers of jobs, average wages, unemployment, and local job listings. These data elements will be crucial to local planners, administrators, and monitors of welfare reform. For child advocates, these data provide the beginning point to evaluate the identifiable barriers with which families must cope and the effects of welfare reform on the overall well-being of children.

KENTUCKY'S CHILDREN IN THE 90's

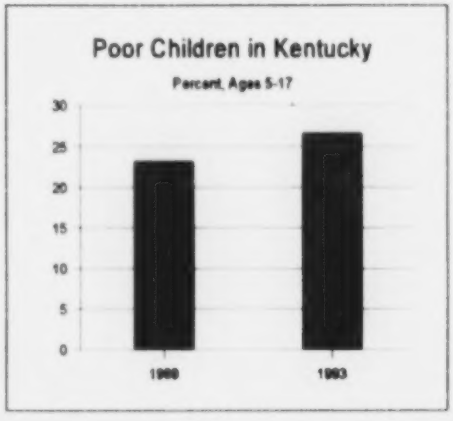
Just as the 30's and the 60's are remembered as times when dramatic new social policies were implemented which related to children, so will the 90's be remembered for federal welfare reform. When President Clinton ran for election in 1992, he promised to end "welfare as we know it." In 1996, Congress passed and President Clinton signed the Personal Responsibility and Work Opportunity Reconciliation Act. Child advocates fear that the redesign of the primary welfare program, which used to be known as Aid to Families with Dependent Children (AFDC), will further erode conditions for children. Under the new Transitional Assistance to Needy Families program (TANF, also known as K-TAP in Kentucky), parents are required to enter the labor market or face penalties and ultimate loss of cash benefits. However, some may be unable to find a job that pays a living wage or to secure necessary support services for their children such as child care and health insurance.

The responsibility for the design of welfare reform programs has been passed from the federal level to the state level. The state of Kentucky also has devolved responsibility down to the local level. The data provided in this year's KIDS COUNT Data Book will provide local planners tools to assess the population of welfare recipients and the local labor market. We have also collected data that can form the baseline for evaluating the results of welfare reform, especially as it impacts the well-being of children.

Numbers and Proportion of Children

Both the numbers and the proportion of children in Kentucky are down in the 90's, reflecting what many demographers call the graying of America. In 1990, 26 percent of all Kentuckians were under 18 years old; in 1997, the percentage of children decreased to 24.2. However, this trend may not continue in the next few years, as the number of children six and under is growing, up almost 5 percent in the 90's.

Careful study of each county's trends will reveal much about the demand for resources over the next decade or two, especially for counties whose child population is rapidly growing, signaling the need for increased education resources.



Child Poverty on the Rise in Kentucky

More than one in four children in Kentucky is poor. Furthermore, recent Census estimates of the numbers of poor school-aged children indicate both growing numbers and percentages of poor children in

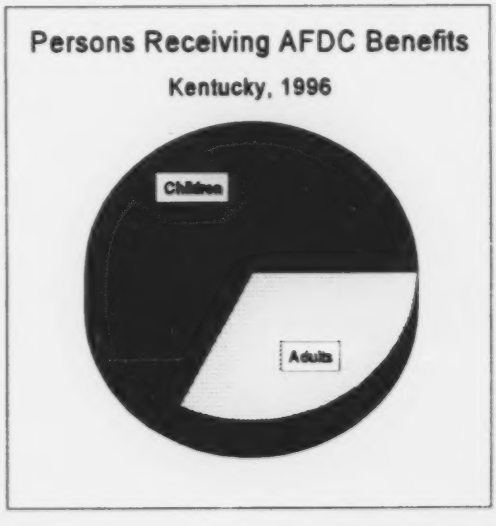
the state. The number of poor school-aged children in Kentucky rose by 12.5 percent, from 160,547 in 1989 to 180,606 in 1993. Most counties' statistics also reflect the trend of growing child poverty.

The federal government sets the official poverty level for families based on family size. Adjusted annually to reflect inflation costs, the poverty level is used to calculate a family's eligibility for a wide variety of assistance programs. For 1997, the poverty guidelines are as follows:

Size of family unit	Poverty guideline (Annual earnings)
1	$ 7,890
2	$10,610
3	$13,330
4	$16,050
5	$18,770
6	$21,490
7	$24,210
8	$26,930

Children Make Up the Majority of the Welfare Population

Public opinion that drove the demand for welfare reform focused on adults and unpopular adult behaviors and resulted in program redesign to move welfare recipients off cash assistance into jobs. The truth is that the majority of welfare recipients are children who are not responsible for their parents' action or inaction.



In Kentucky, 68 percent of the Kentucky residents receiving cash benefits under the old AFDC program in 1996 were children. Almost half of the individuals receiving food stamp and Medicaid benefits in 1996 were children. Obviously, the push to reduce the numbers of individuals receiving benefits will directly affect children. Parents who are able to find well-paying jobs that provide benefits may increase the well-being of their children. However, for parents who can only find very low wage jobs, who are unable to find any employment, or who are sanctioned or "fall off" the program, their children will suffer greatly.

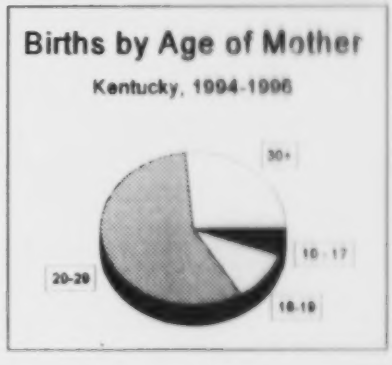
Funded by the Annie E. Casey Foundation

Each county profile provides the numbers of children enrolled from 1994 to 1996 in the four major poverty programs: AFDC (now called TANF or K-TAP), food stamps, SSI (social security income for low-income children with disabilities), and Medicaid. Pie graphs also display the proportion of all children in each county who were enrolled in the programs.

Birth and Death Trends

A number of birth and death trends for children are analyzed, comparing the three year averages for 1989-91 to 1994-96. For the state as a whole, the direction of change in the 90's is positive. The numbers and rates of infant deaths, child deaths, and violent teen deaths are down. The teen birth rate has decreased and births with first trimester prenatal care have increased. The only exception to the good news is the statewide percent of low birth weight babies, which has increased by 10 percent during the 90's.

For the state as a whole, as well as for each county, the pie charts display the age of mothers giving birth in 1994-96 and their marital status. While teen births remain an issue for children's well-being, teen births are less than 20 percent of all Kentucky births. In fact, just 5.5 percent of all births in 1994-96 were to teens below 18 years of age. Obviously, reducing or even eliminating all births to teens is just one of many solutions needed to address the issues of welfare reform and child poverty in our state.



The Local Job Market

Generally, economists look to the unemployment rate to get an idea of how much joblessness there is in a particular locality. The KIDS COUNT Data Book provides each county's unemployment rate for 1990 and 1996. Just as for the state as a whole, generally unemployment rates have fallen and the numbers of persons employed has risen. However, the unemployment rate only reflects the proportion of persons actually looking for a job. It is important to note that the unemployment rate does not reflect the numbers of adults now on welfare who must now seek employment or risk losing benefits for themselves and their children.

Employment is divided into ten general categories. For each county the numbers of jobs in those ten sectors in 1990 is compared to the number in 1995. Average earnings for each sector are also provided. (For some counties, the chart is incomplete because the small number of jobs in a job sector in a single county did not allow for confidentiality. In other words, if there is only one employer in the county in a given job sector, reporting the average wages would reveal the average wages of a certain company.) While average

earnings reflect actual earnings per job, not all jobs are full-time jobs. In the same way, the total number of jobs in a county may not reflect the total number of persons employed. One individual may hold more than one job.

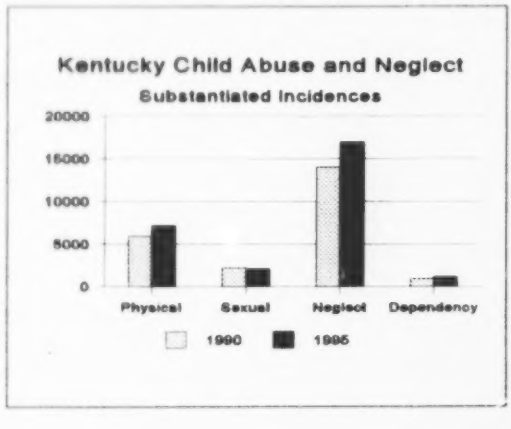
For the state as a whole, the highest paying job sector was mining. Statewide, mining was also the only job sector that lost jobs during the 90's. The lowest paying sector was retail trade, where half of all jobs paid below $14,080, not much above a poverty level income for a family of three. In each county, the average wages per job sector can be compared to the overall county average as well as to the overall state average.

Two recent national reports highlight the difficulties facing low wage workers. According to a recent report released by the Economic Policy Institute in Washington, D.C., hourly wages for the lowest 20 percent of workers in Kentucky were $6.24 in 1996. While this represents an increase from inflation adjusted 1989 wages, wages for the lowest paid workers have actually fallen 17.2 percent since 1979. Data just analyzed by the Center for Budget and Policy Priorities, also in Washington, D.C., show that from 1994 to 1996 the poorest families in Kentucky earned on average $7,364 per year. The earnings gap between the richest and poorest families in Kentucky out paced all states except Arizona, West Virginia, New York, and Connecticut. In the late 70's the wealthiest Kentucky families earned seven times the poorest families; by 1996, the wealthiest families earned $99,210 — 13.5 times the poorest.

In a report developed in July 1997, by the Kentucky Cabinet for Families and Children, the number of job listings with the Department of Employment Services was reported to be 15,891. The number of adults receiving welfare benefits who will now be required to find employment is estimated to be between 50,000 and 60,000. In addition to the dearth of available jobs, two other barriers to finding and retaining employment are the lack of a car and a phone. According to the 1990 Census, more than one in ten Kentucky households do not have access to neither a phone nor a car. County by county these percentages vary greatly.

Child Abuse Continues to Go Up

Each year Kentucky KIDS COUNT provides the numbers of child abuse and neglect reports and substantiated incidences. In every category of abuse, with the exception of sexual abuse, the state trend reflects an increase in substantiated reports of abuse and neglect from 1990 to 1996. The numbers of reports reflect the demand on the investigative services of the Department for Social Services and local law enforcement agencies. The numbers of substantiated incidences reflect the growing



numbers of children maltreated by caretakers, as well as the increasing demand on treatment services. That over 27,000 substantiated incidences of child abuse or neglect occurred in 1996 is staggering to imagine.

Education Data

Education data are reported for the school year 1995-1996. Data from other years is available in earlier additions of Kentucky KIDS COUNT Data Books. Six data elements are reported for each school district within a county. Comparisons can be made between school districts within a county and between a local district and statewide averages.

What Can I Do?

Act as an individual. Children need individual attention. While this attention most often comes from parents and other family members, important one-on-one relationships can be formed with other adults.

- With your own children — be a better parent or grandparent.
- With other people's children — be a friend, volunteer, mentor, or advocate.

Act as a community. Children are not the sole responsibility of parents. Communities — and the institutions within communities — have a role to play in the development of children.

- Support local schools and education reform efforts, whether or not you have children in school.
- Negotiate with your employer to make the workplace more "family friendly," by promoting personnel policies which allow you to participate more in your children's lives.
- Volunteer with civic and church groups that provide programs for children and their families.
- Identify a need in your community and recruit others to help you create a new program to help children.

Act politically. Public policies concerning education, social services, job training, and economic development have real impact on children and families.

- Inform yourself — use the information in this book to begin to understand children's issues in Kentucky and in your community.
- Inform others — spread the word and recruit others to your advocacy campaign.
- Demand action — results will come when enough people demand change in the way children are treated. Children can never have too many active friends.

If you would like more information or to become more actively involved in children's issues, call Kentucky Youth Advocates in Louisville at 502-895-8167 or in Frankfort at 502-875-4865.

Definitions, Methods, and Data Sources

The 1997 Kentucky KIDS COUNT Data Book uses fourteen data sources to present a statistical portrait of Kentucky's children, their families, and their local communities. Kentucky Population Research (KPR) of the Urban Studies Institute, University of Louisville compiled the data and designed the profile. KPR is also the source of population data used in the report as the basis for rates and standardization of indicators. Data, displayed in graphs and tables on two pages each for the state and its 120 counties, are described in their order of appearance.

Front Page

Population by Age, 1997. Pie graph shows percent population under 18, 18-64, and 65 and over. Source: Kentucky Population Research, University of Louisville.

Population, 1990 and 1997. Numbers of total persons, children under 18, and children under 6 with percent changes are shown. These data are from the 1990 U.S. Census of Population and Housing (April 1, 1990) and Kentucky Population Research projections (July 1, 1997).

Persons in Poverty, 1989 and 1993. Numbers of total persons and children 5-17 who were living in poverty according to federal guidelines are presented along with percent change. Poverty status is based on household size and income. For example, the poverty threshold for a family of four was $12,674 in 1989 and $14.763 in 1993. Data for 1989 were obtained for the 1990 Census of Population and Housing. Data for 1993 were produced by the Small Area Income and Poverty Estimates Program, U.S. Bureau of the Census.

Median Household Income, 1989 and 1993. Same sources as Persons in Poverty.

Poverty Rates, 1989 and 1993. Bar graph shows poverty rates for total persons and children 5-17. Rates are the number of person in poverty expressed as a percent of all persons for whom poverty was determined (household population) in the respective age group. Data were obtained from same sources as "Persons in Poverty."

Children and Poverty Programs, 1994, 1995, and 1996. Numbers of total persons and children enrolled in four poverty programs are presented for each year along with percent change from 1994 to 1996. The eligible age of children was determined by each program. The programs are:

- **Aid to Families with Dependent Children (AFDC).** Enrollment numbers were monthly averages for fiscal year (July through June). Source: Kentucky Department for Social Insurance, Cabinet for Human Resources.

Funded by the Annie E. Casey Foundation

- **Food Stamps.** Enrollment numbers were from June of each year and were obtained from Kentucky Department of Social Insurance, Cabinet for Human Resources.
- **Supplemental Security Income (SSI).** Numbers of recipients during December of each year were obtained from the U.S. Social Security Administration.
- **Medicaid**. Data were the monthly averages for the fiscal year. Source: Kentucky Department for Medicaid, Cabinet for Human Resources.

% County Kids in Program, 1994-96. Three-year averages of the number of children enrolled in each of the four poverty programs are shown in pie graphs as the percent of all children in the county (or state) in 1995. The population base was defined as persons under 18, except for Food Stamps for which persons under 19 were used.

Vital Statistics, 1989-91 and 1994-96. Three-year averages of nine birth and death statistics are presented along with percent change. Two additional birth statistics are shown in pie graphs as averages for the 1994-96 period only. Data were obtained from the Vital Statistics Branch, Cabinet for Human Resources. In counties with small population size, vital statistics, particularly death statistics, should be interpreted with caution because of the small number of cases.

- **Average Annual Live Births.**
- **Average Annual Infant Deaths.** Deaths of children under one year of age.
- **General Birth Rate.** Total live births per 1,000 women aged 15-44.
- **Teen Birth Rate.** Births to girls under 18 per 1,000 girls aged 12-17.
- **Early Prenatal Care.** Percent of live births which had received prenatal health care during the first trimester.
- **Low Birthweight.** Percent of live births weighing less than 2,500 grams.
- **Infant Mortality Rate.** Deaths of children aged under one year per 1,000 live births.
- **Child Death Rate.** Deaths of children aged 1-14 per 100,000 population.
- **Teen Violent Death Rate.** Death by suicide, homicide, and accidents to persons aged 15-19 per 100,000 population.
- **Births by Age of Mother.** Pie graph shows percent of live births to girls 10-17 and women 18-19, 20-29, and 30 and over.
- **Births by Marital Status of Mother.** Pie graph shows percent of live births to married and unmarried women.

Back Page

Local Job Market. Multiple data sources were used to portray economic conditions for local workers.

Labor Force Status, Population 16 and Older, 1996. Pie graph displays the percent of persons, 16 and older, who were employed in the civilian labor force, unemployed,

and not in the civilian labor force. Population estimates from Kentucky Population Research were combined labor force data from the Kentucky Department for Employment Services, Workforce Development Cabinet.

Population, 16 and Older, 1990 and 1996. Numbers of persons, obtained from the 1990 Census (April 1, 1990) and KPR estimates (July 1. 1996), are shown with percent change.

Civilian Labor Force, 1990 and 1996. Annual average monthly estimates of persons active in the civilian labor force were produced by the U.S. Bureau of Labor Statistics and maintained by the Kentucky Department for Employment Services, Cabinet for Human Resources. Shown with percent change, these data are subdivided by:

- **Employed.** Persons who worked part-time or full-time during the period.
- **Unemployed.** Persons who did not work and were actively seeking work during the period.
- **Unemployment Rate.** Number of unemployed persons divided by the number of employed and unemployed persons, multiplied by 100, and expressed as a percent.

Not in the Civilian Labor Force, 1990 and 1996. Presented with percent change, the numbers of persons not in the labor forces was estimated as the difference between the population, 16 and older, and civilian labor force. These estimates included retirees and military personnel.

Total Jobs, 1990 and 1995. The numbers of jobs by place of work, shown as annual monthly averages along with percent change, are subdivided into ten major industrial classifications. These estimates included part-time and full-time jobs. Blanks indicate that data were not available because disclosure may reveal proprietary information on an employer. Source: Regional Economic Information Systems (REIS), U.S. Bureau of Economic Analysis (BEA).

Average Earnings, 1995. Also from REIS-BEA and shown by major industries, annual average earnings included total wages and salaries derived from jobs located in the county (or state).

Job Listings, July 1, 1997. The numbers of job openings listed with the Kentucky Department of Employment Services were obtained from the *"Statewide" Data Book* produced by the Kentucky Cabinet for Families and Children (revised August 12, 1997).

% Households, without phone, without car, 1990. Source: 1990 U.S. Census of Population and Housing.

Child Abuse and Neglect, 1990 and 1996. From the Kentucky Department for Social Services, Cabinet for Families and Children, child abuse and neglect data show the

annual numbers of incidences reported and substantiated by categories of physical abuse, sexual abuse, and neglect/dependency. Because more than one incident may occur to a single child, these data may over estimate the number of children who are victims of abuse and neglect. A report is considered substantiated after state officials complete an investigation and determine that further action is required to protect the child. Definitions of physical abuse, sexual abuse, and neglect are commonly understood. Dependency refers to an incidence in which a child is under improper care in a situation that is not due to an intentional act of the parent or custodian. Number of incidences are presented tabularly with percent change and in a bar graph.

Education, School Year 1995-96. Six educational indicators are reported for the state, county, and independent school districts and were obtained from the Kentucky Department of Education. The indicators are:

- **Dropout Rate.** Percent of students enrolled in grades 7-12 who did not enroll the following year and have not graduated or transferred to another school.
- **Retention Rate.** Percent of students in grades 4-12 who did not progress to the next grade level or graduate in a given year. The primary years are not included in the retention measure.
- **Transition Rate.** Percent of high school graduates who were pursuing further education or were employed, either full or part time, six months after graduation. Blank indicates no high school in the district.
- **Attendance Rate.** Average daily percent of enrolled students in attendance in the classroom.
- **% Free/Reduced Lunch.** Percent of students who received lunch free or at a reduced price based on federal guidelines for family income. Children from families with incomes at or below 130 percent of poverty level are eligible for free meals. Those between 130 percent and 185 percent are eligible for reduced-price meals These data are the latest available (March, 1997).
- **Expenditure per Pupil.** Total expenditures from all sources in a school district divided by average daily attendance.

THE KENTUCKY KIDS COUNT CONSORTIUM

Kentucky KIDS COUNT is a unique consortium of researchers and children's activists who have significant expertise in the aggregation, interpretation, and use of data to impact public policy. The Consortium's work includes producing a series of reports on children and families to publicize the needs of children, influence budget and programs decisions, and monitor state and local performance for children.

The Kentucky KIDS COUNT Consortium is part of the national KIDS COUNT project of the Annie E. Casey Foundation in Baltimore, Maryland. The Foundation publishes a national report each year and funds groups to publish data reports on the status of children in their states.

The Consortium includes individuals from three Kentucky universities and one statewide child advocacy organization. The members of the Consortium are:

Ronald Crouch
Director, Kentucky State Data Center,
Urban Studies Institute, University of Louisville

Lorraine Garkovich, Ph.D.
Professor, Department of Rural Sociology,
College of Agriculture, University of Kentucky

Gary Hansen, Ph.D.
Associate Professor, Department of Rural Sociology,
College of Agriculture, University of Kentucky

Debra Miller
Executvie Director, Kentucky Youth Advocates

Betty Olinger, Ph.D.
Assistant Vice President, Academic Affairs,
Kentucky State University

Michael Price, Ph.D.
State Demographer, Urban Studies Institute,
University of Louisville

Valerie J. Salley
KIDS COUNT Coordinator, Kentucky Youth Advocates

Stephan M. Wilson, Ph.D.
Associate Professor, Family Studies,
Research Center for Families and Children, University of Kentucky
